EDUCATION

Seneca Polytechnic

Toronto, ON

- Bachelor of Science in Software Development
 - **Core GPA:** 3.5/4.0
 - **Concentrations:** Web/Application Development
 - **Relevant Coursework:** Object-Oriented Programming (A), Data Structure & Algorithm (A), Cloud & Database Systems (A), Applied Statistics (A), Operating Systems (A+), Canadian Business (A)

PROFESSIONAL WORK EXPERIENCE

Maple Photo Imaging

Toronto, ON

Technical Assistant

04/2025 - Present

- **Reduced production incidents by 80%** by scripting automated API health checks to monitor transaction workflows and surface failures in real time, enabling root cause analysis and resolution before client-facing downtime occurred
- **Cut manual verification effort by 50%** by writing Python scripts with SQL queries to automate transaction data validation, replacing error-prone manual checks and maintaining data accuracy across production order workflows
- **Reduced team onboarding time by 50%** by developing step-by-step technical guides and workflow SOPs covering key production processes, enabling new members to operate independently without recurring support escalations

Real Fruit Bubble Tea

Toronto, ON

Technical Operations Support

09/2025 - Present

- **Improved item throughput by 80%** by querying 800+ weekly transaction records using SQL and Python to identify recurring workflow bottlenecks, producing structured reports that informed targeted process changes across daily order operations
- **Slashed average customer wait times by 90%** during peak hours by analyzing operational performance data (queue time, transaction flow) and presenting actionable insights to leadership through reports, dashboards and data-driven presentations
- **Cut remake rates by 95%** by designing error-tracking checklists to log remake causes by category, coordinating weekly data reviews with team members to surface recurring patterns and standardize preparation steps that prevented repeat mistakes

PROJECT & VOLUNTEER EXPERIENCE

SkipClassPro

Toronto, ON

Full-Stack Application Developer

05/2025 - 12/2025

- **Drove down missed submissions by 90% across 50+ users** by refactoring a React Native application to add real-time deadline synchronization and automated push reminders, eliminating gaps causing users to miss submission windows on Android
- **Boosted data consistency by 75%** by building form validation logic to catch and reject malformed inputs before submission, writing unit and integration tests using Jest to verify sync behavior and enforce data integrity across all user workflows
- **Cut post-release defects by 50%** by configuring GitHub Actions pipelines with npm scripts to automate build, test and release stages, enforcing Jest coverage gates that blocked deployments failing quality thresholds before merging to production

CSHub

Toronto, ON

Frontend Web Developer

05/2025 - Present

- **Automated code quality analysis across 40+ repositories** by building a web application using JavaScript, Node.js and SQL Server to store and query repository metrics, surfacing dependency gaps and code health trends in a centralized dashboard
- **Improved learning clarity for 50+ users** by building interactive JavaScript components that delivered real-time syntax feedback on code exercises, with users reporting faster comprehension when navigating programming concepts across devices
- **Maintained codebase reliability** by writing automated integration tests using Jest within Webpack and npm workflows, documenting test patterns to shorten review cycles and reduce onboarding ramp-up time for new contributors

TECHNOLOGIES

- **Languages:** JavaScript, TypeScript, Python, Java, C# (Fundamentals), C/C++
- **Frontend:** HTML, CSS, React Native, ReactJS, Angular (Fundamentals)
- **Backend & Integration:** Node.js, ExpressJS, RESTful APIs, OpenAPI, GraphQL
- **Database:** SQL Server, MySQL, PostgreSQL, MongoDB, Database Design, Prisma ORM
- **Testing & DevOps:** Jest (Unit, Integration), Docker, Git, GitHub Actions, Linux (CLI)
- **Cloud:** AWS (EC2, S3, CloudFront, IAM), Docker, Git, GitHub Actions, Linux (CLI), Jira
